1. What is relation between Servlet and JSP?

   Servlets are the java code with instructions on how to handle requests
   like post and get so it is in a sense the back end part ,
   JSP or Java servlets are the part that is concerned with the presentation
   of the code and it has determines how HTML is handled so in a sense
   jsp are the front end part of the application
2. What are doGet, doPost, doPut methods?
   Java methods to handle http post ,get and put

3. What is JavaBean?
   JavaBean is a convention on how to handle getters and setter and data
   serialization

4. What is taglib?
   Is a way to write custom tags similar to those of html for example
   <div></div> and give them custom behaviors

5. What is general architecture of Vaadin?
   Vaadin has its own implementation of the famous MVC pattern with
   code being serialized going to a client------> vaadin servlet -->backend
   (model)---->back again
6. What is GWT RPC?
it's a development framework based on java servlet structure
